Omi's Entrepreneur Profile

Our research shows the majority of successful founders fitting into one of nine main "personality profiles". These profiles represent a combination of strong personality traits that postively correlate with entrepreneurship.

“The Architect”

With thoughtful planning and disciplined thinking, Architects have a natural ability to execute on great visions.

In particular, Architects:

- ① Are extremely trustworthy 'team players', and always deliver on their promises
- ① Excel in planning, managing, and executing long term, strategic projects
- ① Have no problem multitasking, always producing high-quality work
- ① Display a calm attitude that allows them to work seamlessly with others

Omi's Strongest Traits

These are their greatest entrepreneurial strengths.

Strength

Entrepreneurial Analysis

STRONGEST TRAIT

100

Very High Intuition

Intuitive people use their perception and instinct to guide their thinking.

- ① They are able to make quick decisions based on their "gut feeling" and the accumulated knowledge of their past experiences
- ① They are very perceptive and tend to notice cues or patterns that most others miss
- ① They take great care to understand the context and nuance of any situation, and others see them as credible and authentic as a result
- ① They are often seen as confident and natural leaders by others
- ① They will very rarely make the same mistake twice

You show a great level of Intuition that helps you make quick decisions with confidence and poise. Others see you as a reliable leader, and they trust your insight. The type of intelligence you possess makes you charismatic, and people often ask you for advice. You are principled and have the utmost confidence in your judgment.

As you easily tune in to others, your gut feelings are mostly accurate. You are usually fully present and see events from a larger perspective. All these qualities help you to be a few steps ahead of the competition and come up with innovative solutions.

Although your intuition helps you a lot, overreliance on it can sometimes lead to bad choices. If you have a very high score on Intuition, try to integrate your rational thought into your decision-making process more.

91

Very High Planning

Planners look beyond the present, and like to be prepared and organized for the future.

- ① They like to organize their time and commitments well in advance
- ① They highly value strategic planning, order, and staying on track
- ① They are generally organized, efficient, detail-oriented, and have the ability to bring order to chaos
- ① They are strategic thinkers that can focus on both short-term and long-term priorities, simultaneously
- ① Others feel reassured by their consistency, reliability, and analytical thinking

You have efficient systems for turning your ideas into reality. Leadership positions feel natural to you as you are highly skilled in strategizing and organizing work. Your consistency and dedication ensure that tasks are completed quickly and accurately. With that vital trait in place, you earn the respect of your coworkers, who appreciate your stability and know where they are going with you.

You value doing 'the right way' with a high level of quality. The roadmaps you create are clear, and with thoughtfully assigned roles and responsibilities. Moreover, you differentiate long-term from short-term goals very well and manage to reroute your plans when it is the appropriate time to do so.

The downside to being a great planner is that you can fall into the trap of being a perfectionist and may end up prioritizing planning over execution. Planning and execution go hand in hand; push yourself to take action more frequently.

90

Very High Patience

Patient people are able to handle delays, problems, and setbacks without getting frustrated or angry.

- ① They have no problem working with others that have different work styles and methods
- ① They are seen as even-keeled, and rarely get upset or anxious relating to factors outside of their control
- ① They tend to collect a lot of information before making decisions
- ① They are able to sustain a high level focus for a long period of time, and as such tend to perform well on complex projects
- ① They are very detail oriented and prefer to focus their attention on a smaller number of projects at any given time

You are deliberate and logical with your actions and value things being done correctly without errors. It doesn't bother you if a project requires more time than expected to be fulfilled.

You rarely become anxious or upset, and even in challenging situations, you remain reliable. You are not impulsive and always gather data before making decisions. Your unwillingness to rush prevents you from making mistakes, and even when changes are imminent, you transform instead of revolutionize. You are an exceptionally trustworthy leader with a calming influence on your team.

With a high score in Patience, your ability to delay gratification can sometimes result in inaction and, due to which, you miss opportunities to learn and progress.

Improvements for consideration

These are areas of concern that are typically associated with extreme scores on your most and least dominant personality dimensions. These may not all be applicable to you, depending on how pronounced your individual characteristics are.

Weakness

Entrepreneurial Analysis

21

Moderately Low Reflection

People with low Reflectiveness may struggle to look "inwards" and learn from their mistakes and experiences.

- ① They tend to move very quickly from project to project, and decision to decision, which can be an asset but also can cause them to miss out on valuable learning
- ① They don't assign much value or put much effort into analyzing the results of the past
- ① They may be less self-aware of how their actions and behavior impact others or how others perceive them
- ① They may be less likely to take responsibility for mistakes
- ① They are naturally inclined to make the same mistakes twice

People with a low level of Reflection will engage in self-awareness reasoning only if prompted. You don't find much value in constantly analyzing yourself and the consequences of your actions. What is done is done, and you typically prefer not to waste time digging deeper into the past. However, you can fail to draw important conclusions and look critically at both successes and obstacles, in order to learn what worked and what didn't.

Being conscious of how your words and actions affect others is vital for thriving in a team environment; make sure to improve your behavior in this regard. Moreover, taking responsibility for mistakes is essential for growth – if you don't realize when you step on the wrong foot, you are likely to repeat those same mistakes in the future. Being accountable to some of your co-founders and actively asking them for their advice can be surprisingly beneficial as well.

21

Moderately Low Adaptability

People with low Adaptability may find it stressful to operate in environments with shifting priorities and challenges.

- ① They tend to prefer more structured, planned, and controlled projects and "stick to what they know"
- ① They may be risk-averse or less open to new ideas and experiences, which can lead to missed opportunities
- ① They may take more time than others to adjust and adapt to unexpected outcomes or necessary updates in strategy
- ① They may show a general resistance to change, even in situations where change is in their best interest
- ① Learning from mistakes may be less natural for them

Someone with low Adaptability will likely prefer a more structured approach to projects. You may be reluctant to experience new things and might take longer than others to adjust to updates in strategy or unexpected outcomes. You might be unwilling to accept last-minute changes or experiments.

A good approach for improving your adaptability is 'planning to make mistakes' as well as learning from them. To start feeling comfortable with unfamiliar situations, practice exposing yourself to them more often. Research new business opportunities and let yourself pursue the ones that interest you. Test different work routines or methodologies for your team and measure their advantages. This exercise will help you incorporate new techniques without resistance and will make you more open to suggestions that can have a positive impact on your career.
